

Communication Boards

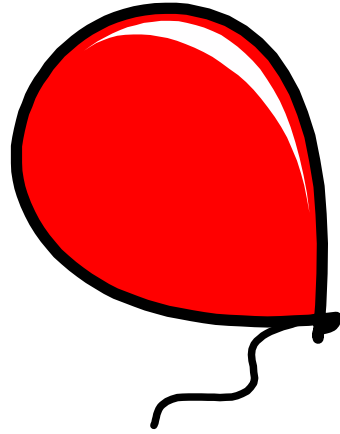

- A communication board is a tool that supports a child who has not yet developed their verbal communication. Its purpose is to enable the child to make choices and express their wishes by pointing to the symbol on the card.
- You can find a sample of some communication boards [here](#).
- Print these off, laminate them and put these in your areas in the setting so they are available all of the time for all children
- Refer to these when you are speaking to the children to model their use
- If you require further support please refer to the MCH advice sheet
